To RBIS International School,

Amidst prevailing global challenges, the adoption of the HASSE (Houston Association for Space and Science Education) Distance Learning Virtual Program by RBIS International School stands as a pivotal advancement in both educational innovation and global understanding.

HASSE and RBIS will work closely, utilizing an innovative distance learning model to bridge geographical and temporal limitations, a measure that is imperative in our digitally interconnected era. This model enables students to immerse themselves in sophisticated subjects such as Rockets, Rovers, Spacecraft, and Space Exploration, all under the meticulous guidance of NASA specialists.

In conclusion, the launch of the HASSE Virtual Program at RBIS marks a remarkable stride in Thailand towards bridging the gap between theoretical learning and real-world application. It propels students to transcend conventional academic confines and to grasp the myriad opportunities within space education, ushering in an era of boundless learning and exploration, steered by expert insight and unwavering educational dedication.

The Houston Association for Space and Science Education (HASSE) is a 501(c)(3) organization dedicated to inspiring future generations in the fields of STEM. HASSE has been cooperating with NASA's Space Center Houston, Texas A&M University, University of Houston, and Rice University since 2004 to host international STEM education programs. Over the past 18 years, students from 20 countries have attended the HASSE programs.

Sincerely yours,

James Liu

Co-Founder and President

Houston Association for Space and Science Education
